Plot Comments: Each variety received 8 gal./acre of 10-34-0 in a 2x2 band at planting and a liquid inoculant down in furrow. This particular plot showed signs of chemical carryover from last year that effected random areas throughout the field. This set some of the varieties back and might help to explain some of the higher moisture contents on a few of the varieties.

Gross \$ / acre are calculated at \$6.9 / Bu.
